## **Montana Board of Oil and Gas Conservation Environmental Assessment**

Operator: Continental Resources, Inc. Well Name/Number: Cooper 1-10H
Location: NE NW Section 10 T26N R53E
County: Richland , MT; Field (or Wildcat) W/C (Bakken Horizontal)

Air Quality
(possible concerns)
Long drilling time: No, 30 to 40 days drilling time.
Unusually deep drilling (high horsepower rig): No triple derrick drilling rig to drill to
18,816'MD/9,100'TVD a single lateral horizontal Bakken Formation well.
In/near Class I air quality area: No Class I air quality area, in the area of review.
Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required
<u>under 75-2-211.</u>
Mitigation:
_X Air quality permit (AQB review)
Gas plants/pipelines available for sour gas
Special equipment/procedures requirements
Other:
Comments: No special concerns – using triple rig to drill a 18,816'MD/9,100'TVD single
lateral horizontal Bakken Formation well test. If there are existing pipeline for gas in the
area then gas must be tied into system or if no gathering system nearby gas can be
flared under Board Rule 36.22.1220.
Water Quality
(possible concerns)
Salt/oil based mud: Yes, oil based invert drilling fluid system on the mainhole and
saltwater for the horizontal lateral. Freshwater and freshwater mud system on surface
hole,
High water table: No high water table anticipated at this surface location.
Surface drainage leads to live water: Yes, closest drainages are unnamed ephemeral
tributary drainages to West Charlie Creek, about 1/8 of a mile to the north and 3/8 of a
mile to the south from this location.
Water well contamination: No, nearest water wells are about ¾ of a mile to the west
northwest and about 1 mile to the southeast from this location. Depth of these water
wells range from 90' to 450'. Surface hole must be drilled with freshwater and
freshwater mud. Surface casing will be set at 1050' and cemented to surface.
Porous/permeable soils: No, silty sandy clay soils.
Class I stream drainage: No Class I stream drainages in the area of review.
Mitigation:
X Lined reserve pit
_X_ Adequate surface casing
Berms/dykes, re-routed drainage
_X Closed mud system
Off-site disposal of solids/liquids (in approved facility)
Other:
Comments: 1050' of surface casing cemented to surface adequate to protect

<u>freshwater zones. Continental Resources will utilize a closed loop mud system with on site burial of cuttings in a lined pit.</u>

## Soils/Vegetation/Land Use

(possible concerns)
Steam crossings: No stream crossings anticipated, only crossing ephemeral drainages.
High erosion potential: No, moderate cut, up to 12.9' and moderate fill, up to 17.3',
required.
Loss of soil productivity: No, location will be restored after drilling, if nonproductive. If
productive unused portion of drillsite will be reclaimed.
Unusually large wellsite: Yes, a large wellsite, 500'X270'.
Damage to improvements: Slight, surface use grassland prairie.
Conflict with existing land use/values: Slight
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
X Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
Other
Comments: Will use existing county road, #146. About 4528' of new access road will
be built into this location, from the county road. Drill cutting will be disposed of in the
lined cuttings pit. Oil based invert drilling fluids will be recycled. Reserve pit fluids will
be recycled and/or haul to a commercial disposal. Lined cuttings pit will be backfilled
when dry. No special concerns.
Health Hazards/Noise
(possible concerns)
(possible concerns) Proximity to public facilities/residences: Closest residences are about 3/4 of a mile to the
(possible concerns)  Proximity to public facilities/residences: Closest residences are about ¾ of a mile to the west northwest, about 1.25 miles to the southwest, about 1.625 miles to the northeast
(possible concerns)  Proximity to public facilities/residences: Closest residences are about ¾ of a mile to the west northwest, about 1.25 miles to the southwest, about 1.625 miles to the northeast and about 1.625 miles to the northeast is St. Bernard's Church from this location.
(possible concerns)  Proximity to public facilities/residences: Closest residences are about ¾ of a mile to the west northwest, about 1.25 miles to the southwest, about 1.625 miles to the northeast and about 1.625 miles to the northeast is St. Bernard's Church from this location.  Possibility of H2S: Slight chance of H2S (Mississippian Formations).
(possible concerns)  Proximity to public facilities/residences: Closest residences are about ¾ of a mile to the west northwest, about 1.25 miles to the southwest, about 1.625 miles to the northeast and about 1.625 miles to the northeast is St. Bernard's Church from this location.  Possibility of H2S: Slight chance of H2S (Mississippian Formations).  Size of rig/length of drilling time: Triple drilling rig/short 30 to 40 days drilling time.
(possible concerns)  Proximity to public facilities/residences: Closest residences are about ¾ of a mile to the west northwest, about 1.25 miles to the southwest, about 1.625 miles to the northeast and about 1.625 miles to the northeast is St. Bernard's Church from this location.  Possibility of H2S: Slight chance of H2S (Mississippian Formations).  Size of rig/length of drilling time: Triple drilling rig/short 30 to 40 days drilling time.  Mitigation:

Threatened or endangered Species: <u>Species identified as threatened by the USFWS</u> are Pallid Sturgeon, Interior Lease Tern, Piping Plover and Whooping Crane. Species listed as candidate species are the Greater Sage Grouse and Sprague's Pipit. NH tracker website for this Township and Range lists zero (0) species of concern. Mitigation: Avoidance (topographic tolerance/exception) X Other agency review (DFWP, federal agencies, DSL) \_\_ Screening/fencing of pits, drillsite Other: Comments: Federal minerals will be intersected by the horizontal lateral. BLM will do on site EA. Private surface prairie grassland. There maybe species of concern that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to what he would like done, if a species of concern is discovered at this location. The Board of Oil & Gas has no jurisdiction over private surface lands. Historical/Cultural/Paleontological (possible concerns) Proximity to known sites: None identified. Mitigation avoidance (topographic tolerance, location exception) X other agency review (SHPO, DSL, federal agencies) \_ Other: Comments: Federal minerals will be intersected by the horizontal lateral. BLM will do on site EA. On private surface prairie grassland. There maybe possible historical/cultural/paleontological sites that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to his desires to preserve these sites or not, if they are found during construction of the wellsite. The Board of Oil & Gas has no jurisdiction over private surface lands. Social/Economic (possible concerns) \_\_ Substantial effect on tax base \_\_ Create demand for new governmental services Population increase or relocation Comments: Wildcat well. No concerns. Remarks or Special Concerns for this site Well is a 18,816'MD/9,100'TVD a single lateral horizontal Bakken Formation well test. **Summary: Evaluation of Impacts and Cumulative effects** No long term impact expected, some short term impacts will occur.

I conclude that the approval of the subject Notice of Intent to Drill (does/<u>does not</u>) constitute a major action of state government significantly affecting the quality of the human environment, and (does/<u>does not</u>) require the preparation of an environmental impact statement.
